## Environmental Management Organizational Framework

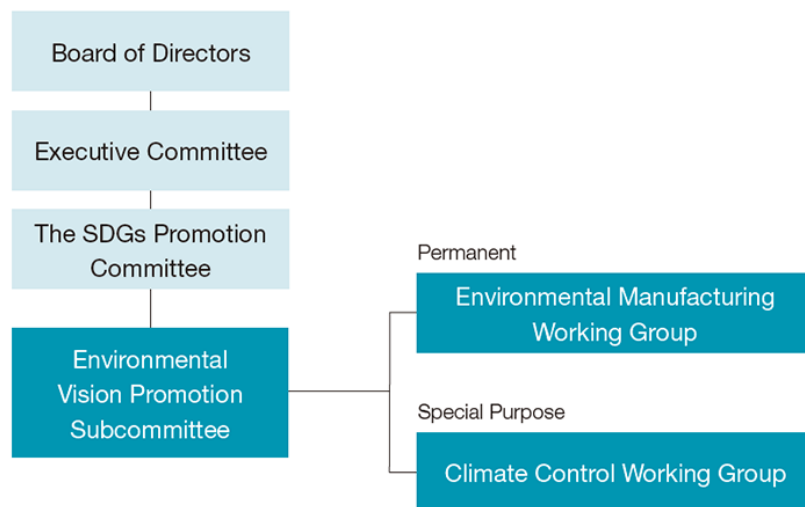

Our Environmental Vision Promotion Subcommittee is responsible for deliberations on policies and measures aimed at realizing Fuji Electric's Environmental Vision 2050, as well as managing and evaluating the progress of measures taken.

The Environmental Manufacturing Working Group, composed of environmental managers from the operating sites, promotes initiatives aimed at fulfilling the Environmental Vision 2050 and complies with our Basic Environmental Protection Policy. The members incorporate the environmental goals and initiatives into their individual divisions and are responsible for managing and fully carrying out initiatives based on environmental management systems.

We have also established specialized organization, professional structure to focus the full force of our abilities into our initiatives for the environmental issues identified as important, and create policies and strategic plans without delay.

Fuji Electric is continuously taking various approaches to resolve environmental issues.

## Environmental Management Targets

Environmental management targets are determined along with measures to be taken to achieve medium-to-long-term targets set forth in Environmental Vision 2050.

In June 2021, we took aim at realizing a decarbonized society and decided to revise our current targets. Going forward, we will determine the specific measures needed to achieve a decarbonized society and carbon neutrality.
