

Introduction of Products

NEW TYPE FUJI ELECTRIC WASHER, TYPE W 291

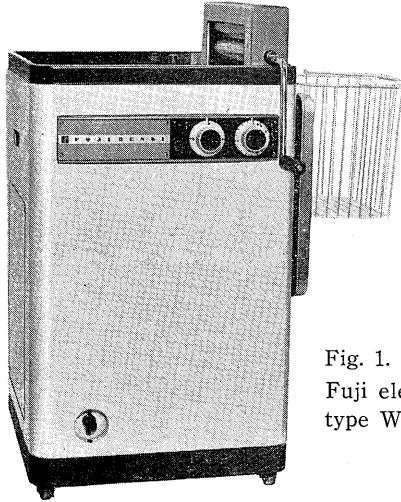

Fig. 1.
Fuji electric washer,
type W 291

Fuji washing machine with unique double effusion system has been very popular for its many merits since it appeared in the sales market. However, in order to give further convenience to the users, our Company put W 291 type new machine on sale as a popular product with moderate price. We hope this new product also to be of good service to the customers than ever.

Special features of Type W 291.

1. Unique Double Effusion System.

With effusion type washers, the water stream is made by two pulsators and the rational action of water stream washes out all soil quickly, thoroughly.

Moreover, because of double effusion system, laundry will not adhere to a side of tub and there is no fear of twisting or damaging the laundry.

2. 2-notched Water Stream Adjust Switch.

By adjusting switch, any fabric is washed out in proper strength of water stream.
.... Strong stream for cotton or linen.

Weak stream for silk or wool.

3. Enamelled Tub.

As the washer tub is of high quality enamelled on the seamless plate, there is no fear of corrosion.

4. Large Sized Wringer.

Wringer is large sized type and good quality rubber, soft and flexible but very strong, is used, so even thick or large material can be wrung easily without adjusting the wringer.

Besides, the wringer is framed which protects water from splashing around. Also, receiving

basket for already wrung laundry is provided behind the wringer, which is handy to carry.

5. Convenient Change-over Cock.

By setting the cock for "Washing," "Rinsing" or "Water exhausting," all process of washing is done efficiently.

6. Automatic switches that do not break down are provided.

Because both time switch and water stream switch are of shock and moisture proof construction, there is no fear of break down of switches. The action of switches is so accurate that efficient washing can be carried out automatically.

7. Automatic Rinsing.

By pouring water through hose from the water faucet, dirty water will go out automatically from exhaust water outlet so good and efficient rinsing can be done.

8. Motor is Fuji motor of established reputation.

For motor, Fuji's condenser motor which has established reputation for its robust construction and strong power is used, so it will withstand usage for long duration.

9. Possible to use even in most limited space.

When washing, only 2 of 4 sides of machine are used, so it is ideal where space is short.

Table 1. Specification of electric washer W 291

Size	Outer dimensions	470 (W) × 460 (L) × 870 (H) mm
	Tub dimensions	290 (W) × 380 (L) × 410 (H) mm
Washing method		Double effusion system
Capacity		1.5 kg
Standard water quantity		30 l
Motor		Output: 100 W condenser motor
Electric source		100/110 V or 200/220 V, 50/60 c/s.
Switch	Time switch	0-15 minutes, (continuous: stop)
	Water stream switch	Rotary switch: Dial marked strong, stop, weak
Wringer		Manual operation Length of rubber roller 275 mm Diameter of upper roller 50 mm Diameter of lower roller 45 mm
Net weight		34 kg
